

CONCRETE

Nova Distinctive Floors presents CONCRETE—the modern floor. The contemporary look of concrete is a popular trend in today's interior design. Our new product is a mineral-synthetic resin surface which can be produced with different types of backings. The material looks and feels like real cement.

Three versions are available: as a tile to glue, on HDF base plate, and on waterproof Hydro-core board. CONCRETE meets all requirements of Class 33 according to EN16511.
